Company Profile

We are a Thailand-based energy company that focuses on the development, financing, construction and operation of green-field power plants.

We started our business in 1993 when B.Grimm pioneered into Thailand's emerging private power generation industry with B.Grimm Power as its investment arm and in the following set up Amata B.Grimm Power.

We are a world class energy company aiming to fulfill the needs of our associates,

business partners and society at large by doing business with compassion in harmony with our neighbors. Together with our partners, we have successfully developed gas-fired electricity and steam generating power plants, purchased additional projects and will develop more. We deliver through our own distribution networks to over 300 industrial users with the service continuity and efficiency of the highest international standards.

B.Grimm Power's total installed capacity is currently 2,878 MW. With new projects already under development and construction, our capacity will rise to 3,502* MW by 2025. Our target is to reach 7,200 MW across the ASEAN region by the year 2025.

We utilise a variety of energy sources, including natural gas, solar, and hydroelectric. We have already obtained new licenses for wind farms and are pursuing other opportunities both domestically and abroad.
