Community Fisheries Area Management Plan (CFiAMP)

Chrouy Svay community fishery management plan envisions the equitable and sustainable management of marine fisheries resources to contribute to poverty reduction among local communities. The plan aims to promote participatory management of marine fishing grounds, including family fishing areas reserved for traditional fishing by local people, community fishery areas, mangrove forests, and intertidal zones. It seeks to ensure the sustainable management of fisheries resources and the equitable distribution of fisheries benefits to citizens, thereby improving the livelihoods of community fishery members through participatory and diversified development. The plan also aims to enhance public awareness and foster a sense of ownership among citizens over their natural resources.

Budget Plan

Chrouy Svay Community Fishery has developed a three-year budget plan to support the implementation of its management and community development activities. The estimated revenue is USD 772,819. The estimated expenditures include USD 510,104 for governance and management, USD 244,680 for economic development and community fishery management, USD 5,985 for promoting women's and youth participation, resilience building, and climate change adaptation, USD 7,050 for the communication and resource mobilization plan, and USD 840 for monitoring and evaluation activities. To finance these activities, the Community Fishery plans to generate revenue through membership registration fees, annual membership contributions, contributions from community livelihood groups, fees collected from non-member and outside fishers, and by submitting funding proposals to commune authorities, relevant provincial government departments, partner organizations, and individual donors.

Community Fisheries and Resources Available

Management of seagrass and mangrove in the community: 9 hectares of existing mangrove forest and 109 hectares of mudflats within the community fishing grounds
