ABOUT US

Angkor Resources Corporation maximizes opportunities across the resource sector. Having been active in the market for over 12 years, we have actively participated in the technological advancements in mineral and energy towards cleaner more sustainable solutions. In the energy areas, we take on carbon reductions and cleaner transitions for energy solutions, both in Canada and in SE Asia.

On the mineral side, projects like the environmental sand cleanup in the Philippines illustrate the advancing mineral development while creating benefits across social and environmental platforms.

Angkor seeks niche markets in the resource sector where we can exercise 'best practices' and provide high demand products while delivering lower impact recovery methods. Our ESG programs, which have followed the UN's 17 Sustainable Development Goals, are woven into each project we undertake. The CSR and ESG activities are not 'extras' but rather form our definition of "how we do business."

Technical Information: The technical and scientific information in this website has been reviewed and approved by Dennis Ouellette, B.Sc., P.Geo., a member of The Association of Professional Engineers and Geoscientists of Alberta (APEGA # 104257) and a Qualified Person as defined by National Instrument 43-101. Mr. Ouelette is Angkor's VP-Exploration on site in Cambodia.
