

Mobile Security

Mobile Threats:

- Types of threats: Malware, insecure Wi-Fi, excessive app permissions, lost/stolen devices
- Consequences of these threats: data loss, privacy invasion, identity theft

Securing Your Mobile Devices

Importance of regular updates: Operating system and apps

Strong lock screen security: Biometrics, strong PINs or passwords

Data encryption: What it is and how to enable it

Remote wipe capabilities: How to set up and why it's important

App Security

Downloading apps from trusted sources: Avoiding third-party app stores

Checking app permissions: Only granting necessary permissions⁶. Public Wi-Fi Risk:

Risks associated with public Wi-Fi: Potential for data interception, malware threats

How to protect oneself: Use of VPNs, avoiding sensitive transactions on public Wi-Fi
