

CAMBODIA 2025 HUMAN DEVELOPMENT STATUS

Cambodia's HDI Value (1990-2023)

Cambodia's HDI Compared to Regional and World Benchmarks (2023)

Cambodia's progress (1990-2023)

HDI value: Increased by 57 percent

Life expectancy at birth: Increased by **15.5** years

Expected years of schooling: Increased by 4.3 years

Mean years of schooling: Increased by 2.4 years

GNI per capita (converted to PPP, constant 2017 international \$): Increased by 308 percent

HUMAN DEVELOPMENT INDEX: The HDI is a summary measure for assessing long-term progress in three basic dimensions of human development: a long and healthy life, access to knowledge and a decent standard of living.

GNI PER CAPITA, PPP (CONSTANT 2017 INTERNATIONAL DOLLARS), refers to gross national income (GNI) converted to international dollars using purchasing power parity (PPP) rates. One international dollar has the same purchasing power over GNI as a U.S. dollar has within the United States. This standardization allows for more accurate comparisons of income and living standards across countries.

CAMBODIA 2025 HUMAN DEVELOPMENT STATUS

Planetary pressures-adjusted Human Development Index 2023

. .

World average

€ 0.070

0.070

High human development average

0.016

Cambodia's 2023 PHDI value (0.572) represents a 6 percent loss from HDI value (0.606), which is likely explained by intensive of use of natural resources to support economic growth

Cambodia's 2023 MPI value (0.070) is over three times the regional average (0.021), indicating that a larger share of its population, especially in rural areas, suffers from multiple overlapping deprivations in health, education, and living standards despite overall economic growth

Multidimensional poverty

Index 2023

0.089

PLANETARY PRESSURES-ADJUSTED HUMAN DEVELOPMENT INDEX: The PHDI adjusts the HDI for pressures on the planet to reflect a concern for intergenerational inequality. It is the level of human development adjusted by carbon dioxide emissions per person (production-based) and material footprint per capita to account for the excessive human pressure on the planet.

While Cambodia sees little adjustment in its HDI reflecting planetary pressures, along with other middle and low human development countries, much more can be done to ensure environmental sustainability, build stronger human security, and help future generations meet their needs.

MULTIDIMENSIONAL POVERTY INDEX: The MPI looks beyond income and identifies multiple deprivations at the household level in three key dimensions: health, education and standard of living, comprising 10 indicators. People who experience deprivation in at least one third of these weighted indicators fall into the category of multidimensionally poor.

CAMBODIA 2025 HUMAN DEVELOPMENT STATUS

26.7%

0.939

136

Cambodia's 2023 IHDI value (0.444) reflects a 26.7 percent loss from its HDI value (0.606), underscoring persistent post-COVID inequalities, with only a marginal improvement from the 26.9 percent loss recorded in 2022

Cambodia's 2023 GDI (0.939) remains below the regional average (0.973), but reflects gradual progress from 0.90 in 2012 and 0.92 in 2017, indicating steady but slow improvement in gender equality in human development outcomes

Cambodia's 2023 GII value (0.506) ranks the country at 136 out of 172 countries

INEQUALITY ADJUSTED HUMAN DEVELOPMENT INDEX: IHDI takes into account inequality in all three dimensions of the HDI by 'discounting' each dimension's average value according to its level of inequality. The IHDI is basically the HDI discounted for inequalities.

GENDER DEVELOPMENT INDEX: The GDI measures gender inequalities in achievement in three basic dimensions of human development: health, education and command over economic resources.

GENDER INEQUALITY INDEX: GII reflects gender-based inequalities in three dimensions – reproductive health, empowerment, and economic activity.
